LDNNow

Low dose Naltrexone

"Low Dose Naltrexone (LDN) is a drug that is credited with helping those with HIV/AIDS, Cancer, autoimmune diseases, and central nervous system disorders (including MS) by boosting the immune system. As well as being effective it is cheap, costing less than one pound a day, and could save the NHS vast sums of money. We therefore urge the Government to fund a trial of LDN on the NHS so that everyone in the UK can reap the benefits of this drug. (summary)" - also see Dr Chris Steele's video www.ldnnow.com

This is an online petition so name, address and postcode are required. The online petition has expired so these signatures are to be submitted on this form as supplemental to the 13018 signatures entered online.. You will not be receiving junk mail from signing this petition.
